How To Learn

Introduction to Chromebook Data Science

Data scientists fail *all the time*

All successful projects failed along the way to success

The process can be frustrating and hard.

Links to videos of professionals failing:

The goal is to answer a question *NOT* to memorize

There is often more than one path to take!

All four lines of code do the
same thing!

```
mtcars %>% tidyr::gather(key = variable, value = value)

tidyr::gather(mtcars, key = variable, value = value)

mtcars %>% tidyr::gather(key = variable)

mtcars_long <- tidyr::gather(mtcars, key = variable)
```

There is often more than one path to take!

Try on your own first, but then…ask questions!

It's important to remember that failing is hard.
